FROM SEATTLE SKIES TO SCORCHING HIGHS

From Your Superintendent, Matt Turner

What a roller coaster start to this summer it's been! We had 7 days of chilly, overcast, and drizzling conditions like Seattle. Suddenly, we got 6 straight days of record-breaking hot temperatures! Wow!

Unfortunately, during that prolonged wet period, we got some Leaf Spot disease breaking out. The Bipolaris Melting Out disease really attacked the Perennial Ryegrass, especially in the untreated roughs. The fairways were hit, but the damage was very minimal. We were able to spray the fairways and get that disease checked up. Typically, the grasses will grow out of the disease, but unfortunately this record-breaking temperature halted the recovery. The rough is supposed to be either Kentucky Bluegrass or Tall Fescue, not Perennial Ryegrass. Untreated Ryegrass is very highly susceptible to diseases. My former colleague/mentor always tells me, "If the grass cannot take a joke, it doesn't deserve to live." I believe in the survival of the fittest. Let the weak ones die out and then we can seed Tall Fescue at the end of August. We are gradually changing the rough grass variety population. We are making huge strides in establishing Tall Fescue. Tall Fescue can take the heat and drought much better than Ryegrass. Tall is also less susceptible to disease.

Please note: Please repair your ball marks and be careful retrieving your ball while the flag is in the cup. These cups are getting beat up very quickly due to carelessness.

Stay cool and see you on the course.
